DIGITAL DOORSIGNAGE

FLEXIBLE DESIGN

Due to its versatility, eascreen is perfectly suitable to be used as a digital door sign, home automation system, and overview displays for events.

The display content and layouts can be easily specified.

AUTOMATIC ROOM BOOKING

eascreen is compatible with all major database types and room booking systems (Access, Outlook, Fidelio, etc.).

This allows automated updates of door sign displays.

CONTROLLING OF END DEVICES

Through RS232 interfaces, eascreen supports the on-off switch of the display devices by default.

This extends the lifetime of the devices remarkably.

HARDWARE

The hardware consists of 6.5" to 17" panel PCs that can easily be mounted onto a wall. The displays can be adapted to the environment with custom designs of the front panel.
