

# Sequoia Dual

One of a kind multiviewer

## ABOUT THIS MANUAL

This manual contains information on how to use the Avitech Sequoia Dual mouse keyboard controller. There are 3 chapters in this manual.

- ✓ **Getting Started** introduces features and specifications as well as external components of the Avitech Sequoia Dual.
- ✓ **System Configuration** discusses the process of setting up your Sequoia Dual.
- ✓ **Basic Operations** introduces the two types of operating modes and demonstrates the mouse and keyboard hot-keys to perform basic operations, as well as using the on-screen user interface to configure your Sequoia Dual on regular and touch-screen monitors.

The following conventions are used to distinguish elements of text throughout the manual.

*provides additional hints or information that require special attention.*

*identifies warnings which must be strictly followed.*

Any name of a menu, command, icon or button displayed on the screen is shown in a bold typeset. For example: On the **Start** menu select **Settings**.

Any name that refers to a mode is underlined. For example: Windows can be adjusted by the Host cursor when the Sequoia Dual is in Host mode.

To assist us in making improvements to this user manual, we welcome any comments and constructive criticism. Please email us at: [sales@avitechvideo.com](mailto:sales@avitechvideo.com).

## WARNING

Do not attempt to disassemble the Sequoia Dual. Doing so may void the warranty. There are no serviceable parts inside. Please refer all servicing to qualified personnel.

## TRADEMARKS

All brand and product names are trademarks or registered trademarks of their respective companies.

## COPYRIGHT

The information in this manual is subject to change without prior notice. No part of this document may be reproduced or transmitted in any form or by any means, electronic or mechanical for any purpose, without the express written permission of Avitech International Corporation. Avitech International Corporation may have patents, patent applications, trademarks, copyrights or other intellectual property rights covering the subject matter in this document. Except as expressly written by Avitech International Corporation, the furnishing of this document does not provide any license to patents, trademarks, copyrights or other intellectual property of Avitech International Corporation or any of its affiliates.

## TECHNICAL SUPPORT

For any questions regarding the information provided in this guide, call our technical support help line at 425-885-3863, or our toll free help line at 1-877-AVI-TECH, or email us at: [support@avitechvideo.com](mailto:support@avitechvideo.com).

## Warranty

Avitech International Corporation (herein after referred to as "Avitech") warrants to the original purchaser of the products manufactured in its facility (the "Product"), that these products will be free from defects in material and workmanship for a period of 1 year or 15 months from the date of shipment of the Product to the purchaser. There is a 3 month grace period between shipping and installation.

If the Product proves to be defective during the 1 year warranty period, the purchaser's exclusive remedy and Avitech's sole obligation under this warranty is expressly limited, at Avitech's sole option, to:

(a) repairing the defective Product without charge for parts and labor; or (b) providing a replacement in exchange for the defective Product; or (c) if after a reasonable time is unable to correct the defect or provide a replacement Product in good working order, then the purchaser shall be entitled to recover damages subject to the limitation of liability set forth below.

## Limitation of Liability

Avitech's liability under this warranty shall not exceed the purchase price paid for the defective product. In no event shall Avitech be liable for any incidental, special, or consequential damages, including without limitation, loss of profits for any breach of this warranty.

If Avitech replaces the defective Product with a replacement Product as provided under the terms of this Warranty, in no event will the term of the warranty on the replacement Product exceed the number of months remaining on the warranty covering the defective Product. Equipment manufactured by other suppliers and supplied by Avitech carries the respective manufacturer's warranty. Avitech assumes no warranty responsibility either expressed or implied for equipment manufactured by others and supplied by Avitech.

This Warranty is in lieu of all other warranties expressed or implied, including without limitation, any implied warranty of merchantability or fitness for a particular purpose, all of which are expressly disclaimed.

This Hardware Warranty shall not apply to any defect, failure, or damage: (a) caused by improper use of the Product or inadequate maintenance and care of the Product; (b) resulting from attempts by other than Avitech representatives to install, repair, or service the Product; (c) caused by installation of the Product in a hostile operating environment or connection of the Product to incompatible equipment; or (d) caused by the modification of the Product or integration with other products when the effect of such modification or integration increases the time or difficulties of servicing the Product.

Any Product which fails under conditions other than those specifically covered by the Hardware Warranty, will be repaired at the price of parts and labor in effect at the time of repair. Such repairs are warranted for a period of 90 days from date of reshipment to customer.

## Extended Warranty Options

Avitech offers OPTIONAL Extended Warranty plans that provide continuous coverage for the Product after the expiration of the Warranty Period. Contact an Avitech sales representative for details on the options that are available for the Avitech equipment.

## Services and Repairs Outside the Warranty Period

Avitech makes its best offer to repair a product that is outside the warranty period, provided the product has not reached its end of life (EOL). The minimum charge for such repair excluding shipping and handling is \$200 (US dollars).

## Regulatory Information

Marking labels located on the exterior of the device indicate the regulations that the model complies with. Please check the marking labels on the device and refer to the corresponding statements in this chapter. Some notices apply to specific models only.

## Federal Communications Commission (FCC) Statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference, in which case the user will be required to correct the interference at his own expense. Properly shielded and grounded cables and connectors must be used in order to meet FCC emission limits. Avitech is not responsible for any radio or television interference caused by using other than recommended cables and connectors or by unauthorized changes or modifications to this equipment. Unauthorized changes or modifications could void the user's authority to operate the equipment. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

## European Union CE Marking and Compliance Notices Statements of Compliance

### English

This product follows the provisions of the European Directive 1999/5/EC.

### Dansk (Danish)

Dette produkt er i overensstemmelse med det europæiske direktiv 1999/5/EC.

### Nederlands (Dutch)

Dit product is in navolging van de bepalingen van Europees Directief 1999/5/EC.

### Suomi (Finnish)

Tämä tuote noudattaa EU-direktiivin 1999/5/EC määräyksiä.

### Français (French)

Ce produit est conforme aux exigences de la Directive Européenne 1999/5/EC.

### Deutsch (German)

Dieses Produkt entspricht den Bestimmungen der Europäischen Richtlinie 1999/5/EC.

### Ελληνικά (Greek)

Το προϊόν αυτό πληροί τις προβλέψεις της Ευρωπαϊκής Οδηγίας 1999/5/EC.

### Íslenska (Icelandic)

Þessi vara stent reglugerð Evrópska Efnahags Bandalagsins númer 1999/5/EC.

### Italiano (Italian)

Questo prodotto è conforme alla Direttiva Europea 1999/5/EC.

### Norsk (Norwegian)

Dette produktet er i henhold til bestemmelsene i det europeiske direktivet 1999/5/EC.

### Português (Portuguese)

Este produto cumpre com as normas da Diretiva Europeia 1999/5/EC.

### Español (Spanish)

Este producto cumple con las normas del Directivo Europeo 1999/5/EC.

### Svenska (Swedish)

Denna produkt har tillverkats i enlighet med EG-direktiv 1999/5/EC.

## Australia and New Zealand C-Tick Marking and Compliance Notice

### Statement of Compliance

This product complies with Australia and New Zealand's standards for radio interference.

# 1. Getting Started

The Avitech Sequoia Dual is a highly innovative device that comes with its own embedded operating system and graphic engines. The Sequoia Dual integrates functions of a KVM (keyboard video mouse) switch and a robust multi-viewer into one enclosure, providing a simple multi-viewing solution for any user who works in an environment with multiple computer and video systems. With a single Sequoia Dual being able to connect up to four computers and instantly switch inputs among them, users can monitor and remotely control any two computers at the same time on a single display with just one set of keyboard and mouse. The Sequoia Dual also supports a variety of video formats from HDMI, DVI-I to VGA and YPbPr. Additionally, its scalability through cascading with other Sequoia devices makes the Sequoia Dual an ideal solution to both individual users and corporate applications.

The Sequoia Dual features an on-screen user interface which allows handy operation and control of the device. By giving relevant mouse commands through the interface, users can easily convert monitoring styles to various layouts, and adjust windows to any size and position on the display. The mouse right-click menu available through the on-screen interface allows users to freely set up or configure numerous features for different applications. In addition, the top menu allows users to lock their windows in size and position, and load previously saved layouts.

In addition to its freely adjustable interface and features, the Sequoia Dual can enter Remote mode to transfer mouse and keyboard control from the Sequoia to the connected computer systems. Users can then remotely control any of the connected computers with the set of keyboard and mouse on the Sequoia. The “Surfer” feature, along with other user-friendly commands supported by the Sequoia Dual allows users to freely switch control between the computers and the host Sequoia in an intuitive manner. Furthermore, for more hands-on user experiences, the Sequoia Dual can be used with a touch-screen display. The touch-screen controls are receptive and intuitive, allowing source switching, window resizing and repositioning, and control of remote computers with just a tap of your finger.

This chapter will continue to introduce more features and specifications as well as external components of your Sequoia Dual.

## 1.1 Package Contents

The following standard items are included in the shipping package:

**Avitech Sequoia Dual**

**Utility Disc (software and user manual)**

**12 V DC/5A Power Adapter**

**Standard Power Cord (USA customer only)**

**Rubber Foot (4 pcs)**

**USB A/B Cable (Optional)**

**HDMI to DVI Adapter (optional)**

**Male to Dual Female Y Splitter Audio Cable (length 1.8 m – optional)**

**VGA to DVI Adapter (optional)**

**HDMI® Cable (length 1.8 m – 1 piece)**

**Table 1-1 Package Contents**

## 1.2 Product Features

The Sequoia Dual is HDCP-compliant and capable of handling HDMI<sup>®</sup>, DVI-I, VGA and YPbPr inputs. Featuring two DVI-I and two HDMI input ports, and one HDMI output port, a single Sequoia Dual can connect up to four computers, four videos, or any combination of four inputs. It can simultaneously display any two of the four inputs on a single display, and allows instant switching of inputs through its on-screen user interface.

The Sequoia Dual features in automatic sensing of input signals, automatic detection and selection of optimum display resolution; it also supports hot-swapping which allows addition and removal of any input/output signals without powering down the device.

For audio monitoring, the Sequoia Dual features a 1/8 inch headphone jack. It also accepts embedded HDMI<sup>®</sup> audio (8ch-stereo) and analog audio (2ch-stereo).

For operation, the Sequoia Dual provides a friendly on-screen user interface that can be controlled by a set of keyboard and mouse, allowing free switching of operating modes and adjustments for numerous behavior that suits different applications. In addition, with Avitech Hook Utility (patent pending), a computer with its own keyboard and mouse can also be used to control the Sequoia Dual through the USB type B port on its front panel . The Sequoia Dual also features in multi-touch support and is compatible with touch-screen displays, offering more flexibility for operation and control.

In addition to monitoring, the Sequoia Dual can remotely control the connected computers through the USB keyboard and mouse connected to its front panel. Utilizing the “Surfer” feature – which allows users to transfer keyboard and mouse control from one computer to another by simply moving the mouse cursor to the window border of the targeted computer, the Sequoia Dual is able to seamlessly switch between and control any of the four computers connected to it with just one set of keyboard and mouse.

Integrated file and folder transfer across computers provides convenient file management. By selecting an origin and a destination through the on-screen user interface, the Sequoia Dual allows simple copy/cut and paste of files/folders across connected computers using its embedded file managing utility, Go! Bridge.

The Sequoia Dual also supports streaming its display through Ethernet connection, allowing computers at far ends to perform remote monitoring and control of the Sequoia. Its video over IP operates on standard 100/1000Mb Ethernet networks for remote monitors.

The Sequoia's front panel features LED indicators for monitoring the followings: Connected Computers (Active or Standby), Operating Mode (Host or Remote), and Power.

The temperature monitor with automatic PWM fan speed controls to protect against system failure. The low noise and speed-varying fan along with the stand-alone and rack mountable module designs make the Sequoia Dual suitable for various work environments. The size of the Sequoia Dual is also greatly reduced to save working spaces and enhance mobility.

For larger applications, the Sequoia Dual can be cascaded with other Sequoia devices, enabling users to control up to five Sequoia Dual and 20 computers with just one set of keyboard and mouse.

1. *Non-standard keyboards (e.g., keyboards with a USB hub, keyboards that need driver installation and programmable keyboard, etc.) are not supported.*
2. *Compatibility between the computer and the Sequoia Dual may depend on the computer's BIOS Setup. If an incompatibility occurs, refer to the computer's BIOS Setup and make sure USB port is enabled if this item exists in the computer's BIOS Setup (typically found in the "Advanced" or "Onboard Device Configuration" menu).*
3. *The Hook Utility currently supports the Sequoia solo series (non-cascaded) and the Pacific X-HDU. Connect a laptop (or desktop) computer to the Sequoia solo series or Pacific X-HDU and simulate keyboard/mouse function for remote control processing (KVM feature).*
4. *Refer to the Hook Utility user manual for more details.*

## 1.3 Specifications

Input	
<b>HDMI or DVI</b>	Automatic sensing
	❖ <i>HDMI/DVI-D mode:</i>
	✓ 1920×1200, 50Hz/60Hz
	✓ 1920×1080, 50Hz/60Hz
	✓ 1680×1050, 50Hz/60Hz
	✓ 1600×1200, 50Hz/60Hz
	✓ 1400×1080, 50Hz/60Hz
	✓ 1360×765, 50Hz/60Hz
	✓ 1280×1024, 50Hz/60Hz/75Hz
	✓ 1280×960, 50Hz/60Hz
	✓ 1024×768, 50Hz/60Hz/75Hz
	✓ 800×600, 50Hz/60Hz/75Hz
	✓ 720×400, 70Hz
	✓ 640×480, 60Hz/75Hz
	<b>or YPbPr</b> (through DVI to YPbPr adapter)
❖ <i>YPbPr:</i>	
✓ 1920×1035i, 59.94Hz/60Hz	
✓ 1920×1080PsF, 23.98Hz/24Hz	
✓ 1920×1080p, 24Hz/25Hz/29.97Hz/30Hz/50Hz/60Hz	
✓ 1920×1080i, 50Hz/59.94Hz/60Hz	
✓ 1280×720p, 50Hz/59.94Hz/60Hz	
✓ 576i, 50Hz	
✓ 576p, 50Hz	
✓ 480i, 59.94Hz	
✓ 480p, 59.94Hz	
❖ <i>VGA mode:</i>	
✓ 1920×1200, 50Hz/60Hz	
✓ 1920×1080, 50Hz/60Hz/30Hz	
✓ 1920×1035, 60Hz/30Hz	
✓ 1760×1100, 60Hz	
✓ 1680×1050, 50Hz/60Hz/75Hz	
✓ 1600×1200, 50Hz/60Hz/75Hz	
✓ 1600×1024, 60Hz	
✓ 1440×900, 50Hz/60Hz/75Hz	
✓ 1400×1050, 50Hz/60Hz/75Hz	
✓ 1366×768, 60Hz	
✓ 1365×1024, 60Hz	
✓ 1365×768, 60Hz	
✓ 1360×1024, 75.1Hz	
✓ 1360×768, 50Hz/60Hz/75Hz	
✓ 1360×765, 60Hz	
✓ 1280×1024, 50Hz/60Hz/72Hz/75Hz/76Hz/85Hz	
✓ 1280×960, 60Hz/70Hz/75Hz	
✓ 1280×768, 50Hz/56Hz/60Hz/75Hz	
✓ 1280×720, 50Hz/59.94Hz/60Hz/75Hz	
✓ 1200×900, 72Hz	
✓ 1152×900, 66Hz/76Hz	
✓ 1152×864, 75Hz	
✓ 1024×768, 50Hz/60Hz/70Hz/75Hz/85Hz	
✓ 1024×576, 60Hz/72Hz	
✓ 960×680, 60Hz	
✓ 960×620, 60Hz	
✓ 960×540, 60Hz	
✓ 852×480, 60Hz	
✓ 848×480, 60Hz	
✓ 800×600, 50Hz/56Hz/60Hz/72Hz/75Hz	
✓ 640×512, 60Hz	
✓ 640×480, 60Hz/72Hz	
<b>or VGA</b> (through DVI to VGA adapter)	

Input	
Transmission of embedded audio signal is supported when passing a HDMI input signal to the DVI-I port using a HDMI to DVI adapter, but not supported when passing a DVI, VGA or YPbPr signal.	
Output	
<b>HDMI or DVI</b> (through DVI to HDMI adapter)	Automatic sensing or user selectable
	❖ 1920×1200 (WUXGA) at 50Hz/60Hz
	❖ 1920×1080 (HD1080) at 50Hz/60Hz
	❖ 1680×1050 (WSXGA+) at 50Hz/60Hz/75Hz
	❖ 1600×1200 (UXGA) at 50Hz/60Hz/75Hz
	❖ 1440×900 (WSXGA, WXGA) at 50Hz/60Hz/75Hz
	❖ 1400×1050 (SXGA+) at 50Hz/60Hz/75Hz
	❖ 1360×768 (WXGA) at 50Hz/60Hz/75Hz
	❖ 1280×1024 (SXGA) at 50Hz/60Hz/75Hz
	❖ 1280×768 (WSGA) at 50Hz/60Hz/75Hz
	❖ 1280×720 (HD 720) at 50Hz/59.94Hz/60Hz/75Hz
	❖ 1024×768 (XGA) at 50Hz/60Hz/75Hz
	❖ 800×600 (SVGA) at 50Hz/60Hz/75Hz
	❖ 640×480 (VGA) at 60Hz
	Transmission of embedded audio signal is not supported when passing an output signal through a HDMI to DVI adapter.
Others	
<b>Peripheral/File Sharing</b>	Method:
	❖ USB type A port (for USB 2.0 hub) ❖ GO! Bridge Utility software
<b>Computer Connection</b>	Up to 4 units (maximum)
<b>Port Switching</b>	Method:
	❖ "Surfer" feature ❖ OSD (pop-up menu)
<b>Power</b>	Power consumption is 25W
	Power Supply (adapter):
	❖ Input (AC): 100 to 240V 50Hz/60Hz ❖ Output (DC): 12V DC/5A
<b>Dimensions/Weight</b>	Dimensions: 152×174×44 mm (6.0×6.9×1.7 inch)
	Weight: 0.70 kg (1.54 lb)
<b>Environment/Safety</b>	Temperature:
	❖ Operating: 0 °C (32 °F) to 40 °C (104 °F)
	❖ Storage: -10 °C (14 °F) to 50 °C (122 °F)
	Humidity: 0% to 80% relative, non-condensing Safety: FCC/CE/C-Tick/Class B

**Table 1-2** Specifications

1. The Sequoia Dual supports VGA/YPbPr input(s) through the optional VGA/YPbPr to DVI adapter(s).
2. Upon inputting a 480i/576i/1080i signal, a judder on the Source 2 image may be observed. This is due to the fact that Source 2's de-interlace process is not as efficient as that of Source 1.
3. The Sequoia Dual's HDMI input/output ports support HDMI revision 1.3 and HDCP revision 1.2.
4. For monitors whose display mode can be set between "Graphic" and "Video", select "Graphic"; for those whose display color format can be set between "RGB" and "YPbPr", select "RGB" (selecting the other ones may lead to corrupted displays).
5. It is suggested to always reboot the Sequoia Dual after switching to a different monitor (especially one that supports different optimal resolution); this will ensure the Sequoia Dual to select the correct output resolution and frame rate.

## 1.4 Connections to the Sequoia Dual

Figure 1-1 Sequoia Dual Components

Front Panel	
❶ Indicators	❖ <b>PWR</b> Glows green when the Sequoia Dual is turned ON
	❖ <b>MODE</b> ✓ Glows green when the Sequoia Dual is in <u>Host</u> mode ✓ Glows amber when the Sequoia Dual is in <u>Remote</u> mode
	❖ <b>1 to 4</b> ✓ Glows green when a particular computer is operating under <u>Remote</u> mode (full control through keyboard and mouse) ✓ Glows amber when a particular computer is operating under <u>Host</u> mode (monitoring only) ✓ Blinks amber on a particular rebooting or powered-off computer connected to the Sequoia Dual
	❖  Connects to the green connector for headphone function (mono)
	❖  Connects to the red connector for microphone function
❷ USB Type A (keyboard/mouse)	Connects to a USB mouse and keyboard (or connects to a touch-screen display). Use these ports for operation and control in <u>Host</u> and <u>Remote</u> mode.
❸ USB Type B	Connects to a computer with its own keyboard and mouse to control the Sequoia Dual (The Hook Utility needs to be installed on that computer to perform such control)
❹ USB Type A (peripheral sharing)	Connects to a USB 2.0 hub, USB flash disk, etc.

Rear Panel	
❻ Microphone/ Headphone/ USB Input	Connect the remote computer's USB (through the USB A/B cable) and audio connectors (through the male to dual female Y splitter audio cable)
❼ DVI Input	Connects HDMI/DVI-I/VGA/YPbPr inputs (an adapter may be required) <i>Note: Transmission of embedded audio signal is supported when passing a HDMI input signal to the DVI-I port using a HDMI to DVI adapter, but not supported when passing a DVI, VGA or YPbPr signal.</i>
❸ HDMI Input	Connects HDMI/DVI inputs through HDMI or DVI signal cable (a DVI to HDMI adapter may be required)
❹ Serial	Updates firmware Supports Avitech ASCII Protocol
❷ Ethernet (IP)	For setup through a network connection For video streaming to remote PC monitoring over Ethernet Supports Avitech Http and ASCII command Protocol
❶ HDMI OUT	Connects a monitor/display through HDMI or DVI signal cable (a HDMI to DVI adapter may be required)
❶ Power Switch	Turns the Sequoia Dual power ON and OFF
❶ Dip Switches	Resets the Sequoia Dual to factory-default settings; or updates firmware
❶ Power (DC 12V)	Connects to the 12V DC/5A power adapter
❶ Kensington® Security Slot	Attach a lock-and-cable apparatus for anti-theft purpose <i>Note: Available on both sides of Sequoia Dual</i>

**Table 1-3** Sequoia Dual Component Description

## 2. System Configuration

This chapter discusses the process of setting up your Sequoia Dual.

### 2.1 Getting the Sequoia Dual Ready

To control your Sequoia Dual directly, connect a keyboard and mouse to the USB type A ports  on its front panel. Alternatively, to control your Sequoia Dual on a computer, use a laptop (or desktop) computer with its own keyboard and mouse and connect to your Sequoia Dual's USB type B port  on its front panel (use a USB A/B cable), and then run the Hook Utility on this controlling computer to simulate mouse and keyboard operation.

When using a touch-screen display, connect the display to one of the USB type A port  with a USB cable to simulate mouse-click action. The Sequoia Dual can then be controlled by tapping your finger on the display.

-  1. The Hook Utility currently supports the Sequoia solo series (non-cascaded) and the Pacific X-HDU. With Hook Utility, use the connected computer to simulate keyboard and mouse function for remote control processing (KVM feature).
- 2. Refer to the Hook Utility user manual for more details.

#### 2.1.1 Basic Setup When Connecting a Regular Display or Touch-screen Display

The following figures show a typical setup with a single Sequoia Dual connected to four computers and a regular/touch-screen display.

-  **DO NOT** place any object on the top or side panels of the Sequoia Dual. Doing so could affect its internal components and/or its heat dissipation.

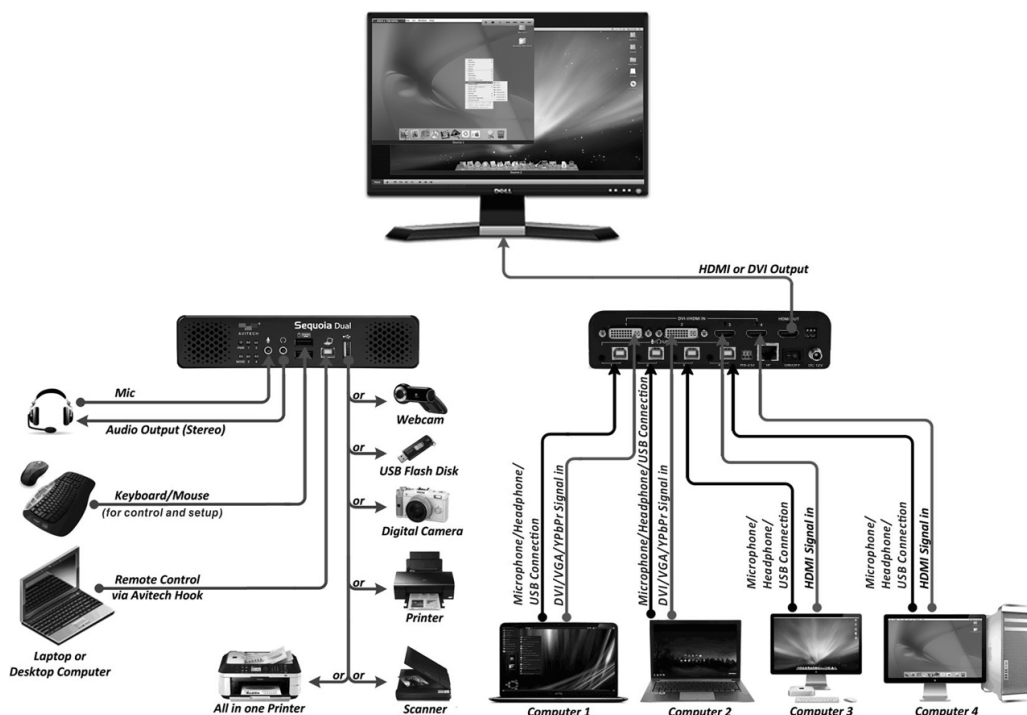

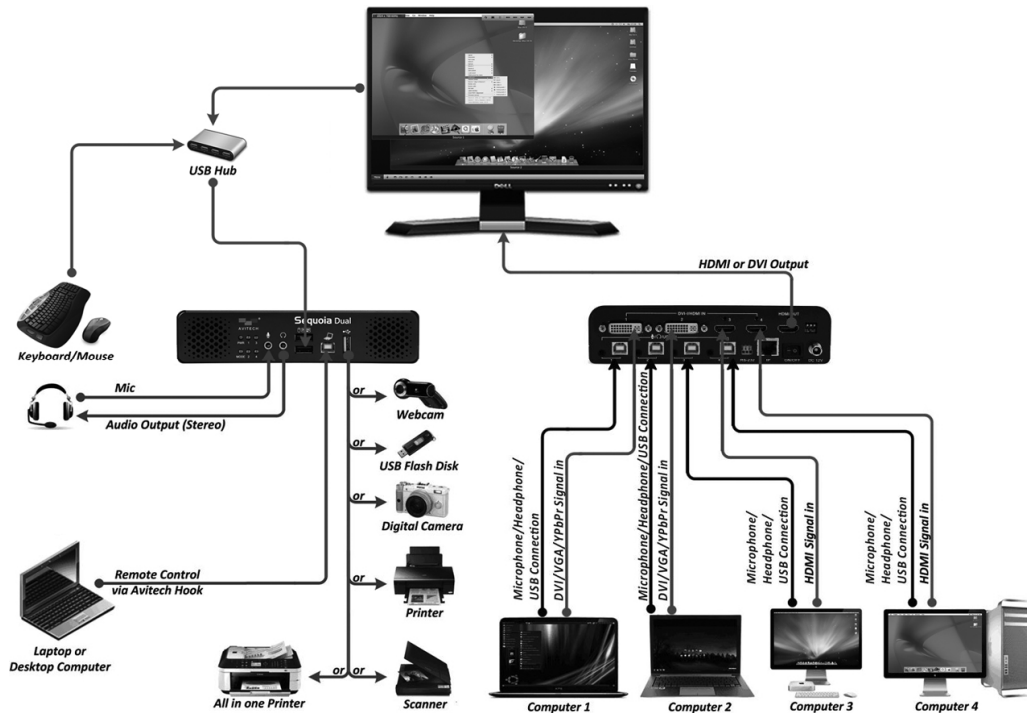

Figure 2-1 Sequoia Dual with Regular Display Setup

**Figure 2-2** Sequoia Dual with Touch-screen Display Setup

**Step 1.** Connect a USB A/B cable to the first computer's USB type A port, and then connect the other end to your Sequoia Dual's source 1 port (USB type B port on its rear panel). Repeat this process for all succeeding computers.

 **(For Windows 2000 users)** Upon connecting your Sequoia Dual to a computer through USB interface for the first time, perform the Windows' on-screen steps to initialize the USB connection.

**Step 2.** Connect the male end of a male to dual female Y splitter audio cable to your Sequoia Dual's source 1 audio port on its rear panel. Connect the two dual female ends of the male to dual female Y splitter audio cable to the first computer's audio ports (mic in and audio out). Repeat this process for all succeeding computers.

**Step 3.** Connect a HDMI or DVI (through a HDMI to DVI adapter) display to the **HDMI OUT** port on your Sequoia Dual's rear panel.

**Step 4.** Connect the first computer's DVI or VGA/YPbPr (through an adapter) output to your Sequoia Dual's **DVI-L** port through a DVI cable. Repeat this procedure for the second computer to **DVI-R**.

Connect the third computer's HDMI output to your Sequoia Dual's **HDMI-L** port through a HDMI cable. Repeat this procedure for the fourth computer to **HDMI-R**.

**Step 5.** Connect a set of mouse and keyboard to the mouse/keyboard USB ports  located on your Sequoia Dual's front panel. When connecting to a touch-screen display, you can choose to connect the display to one of the USB port  of the Sequoia Dual with a USB cable instead. When more than three devices (such as connecting a touch-screen display, a mouse and a keyboard) need to be connected to the Sequoia Dual at the same time, you can use a USB hub to increase the number of USB connections (Refer to figure 2-2).

 Non-standard keyboards (e.g., keyboards with a USB hub, keyboards that need driver installation and programmable keyboard, etc.) are not supported.

**Step 6.** Connect the provided 12V DC power adapter to your Sequoia Dual and power it on.

Step 7. After the boot logo finishes loading, the Sequoia Dual's on-screen user interface with two windows each contains image from one of the connected computers will appear, along with the Host cursor that can be controlled directly through the mouse connected to your Sequoia Dual's front panel.

The pop-up selections  will appear upon moving the Host cursor to a window's top-right position:

- ✓ Click the  icon on a selected window to enter the Sequoia Dual's Remote mode.
- ✓ Remote mode allows direct connection to the selected computer through USB interface.
- ✓ Your Sequoia Dual's (Host) keyboard and mouse will now control the selected computer; the Host cursor will disappear when your Sequoia Dual is in Remote mode.
- ✓ The "Surfer" feature (default setting is ON) is enabled. Moving your cursor out of your current window's border toward the other window, or to the edges that are shared with the other window will automatically switch over your Sequoia Dual's (Host) keyboard and mouse control to that computer.
- ✓ Press the **Pause/Break** hot-key on the keyboard connected to your Sequoia Dual's front panel to return keyboard and mouse control to the Sequoia Dual. The Host cursor will reappear. Right-click anywhere and select **Options**→**Surfer** to toggle off this feature if desired.

### 2.1.2 Basic Setup When Cascading the Sequoia Dual

Cascade is the technique of "daisy-chaining" multiple Sequoia Dual (up to five) through a USB A/B cable(s). It can be used when larger applications that involve having multiple computer systems controlled by a master device. It should be noted that only the keyboard and mouse are cascaded; in other words, when cascading, one set of keyboard and mouse can be used to control five Sequoia Dual (or other Sequoia series) by "surfing" the Host cursor across five displays and switch over control to any of the connected computers. Other functions (e.g., audio, video, and USB hub) are still confined to the associated Sequoia Dual to which they are connected (see Figure 2-3).

The following figure shows three Sequoia Dual cascaded together, with each Sequoia Dual connected to four computers.

 Cascading is available on the Sequoia Dual, 4H, and 2H2U. A combination of any of these Sequoia devices can be cascaded to meet custom applications.

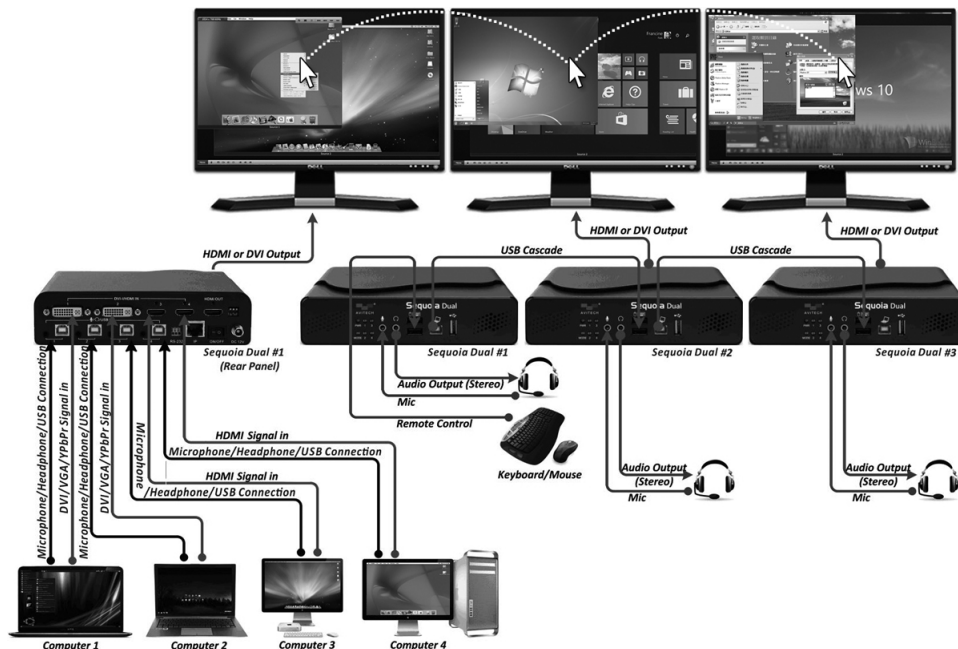

Figure 2-3 Setup of Cascading Three Sequoia Dual

- Step 1. Perform step 1 – 4 for your first Sequoia Dual as outlined in the previous section (2.1.1) “Basic Setup When Connecting to a Regular or Touch-screen Display.”
- Step 2. Repeat the above-mentioned steps for your second and third Sequoia Dual to be cascaded.
- Step 3. Connect a mouse and keyboard to the USB type A ports  located on your first Sequoia Dual’s front panel.
- Step 4. Connect your first Sequoia Dual’s USB type B port  to one of the second Sequoia’s USB type A port  using a standard USB A/B cable. Repeat this procedure to connect the second Sequoia Dual to the third one.
- Step 5. Move your Host cursor across all three displays to allow the system to complete the USB device initialization.

If the Host cursor is unable to move over all three displays, perform step 5 and 6 again.

- Step 6. The pop-up selections  will appear upon moving the Host cursor to a window’s top-right position:
- ✓ Click the  icon on a selected window to enter the Sequoia Dual’s Remote mode.
  - ✓ Remote mode allows direct connection to the selected computer through USB interface.
  - ✓ Your Sequoia Dual’s (Host) keyboard and mouse will now control the selected computer; the Host cursor will disappear when your Sequoia Dual is in Remote mode.
  - ✓ The “Surfer” feature (default setting is ON) is enabled. Moving your cursor out of your current window’s border toward the other window, or to the edges that are shared with the other window will automatically switch over your Sequoia Dual’s (Host) keyboard and mouse control to that computer.
  - ✓ Press the **Pause/Break** hot-key on the keyboard connected to your Sequoia Dual’s front panel to return keyboard and mouse control to the Sequoia Dual. The Host cursor will reappear. Right-click anywhere and select **Options**→**Surfer** to toggle off this feature if desired.
  - ✓ Move the Host cursor across three displays to access computers confined to each Sequoia Dual.

### 3. Basic Operations

The Sequoia Dual always operates in one of its two operating modes: Host and Remote mode. Users are allowed to freely switch between these two modes anytime during the operation for different uses. This chapter discusses these operating modes, their functions, and hot-keys in details.

#### ✓ Host Mode

When your Sequoia Dual is in Host mode, the Host cursor appears on the display upon connecting a mouse device to the front panel of your Sequoia Dual. The cursor will be controlled by this locally connected mouse (In the case of a cascaded setup the cursor will be controlled by the mouse device connected to the Master Sequoia Dual; in the case of using a touch-screen display, the Host cursor can be controlled by a tap of a finger). Host mode provides a monitoring solution for the incoming computer/video signals. Users can use the Host cursor to select and adjust window size, position, and display layout directly through the on-screen interface. Other features such as the mouse right-click menu and the top menu are features of this mode to enhance ease of control and operation and are discussed in details in Appendix A and D.

Upon re-connecting a keyboard or mouse, the Host cursor may disappear. Press the **Pause/Break** key to solve this problem.

#### ✓ Remote Mode

When your Sequoia Dual enters Remote mode, the Host cursor disappears, and your Sequoia Dual transfers the connected mouse and keyboard control to a selected computer system. You can then control this computer as you regularly would through the corresponding window on the display. Your Sequoia Dual can only enter Remote mode to take control of a computer when the correct USB type B port on your Sequoia Dual's rear panel is properly connected to the USB type A port of that computer (using a standard USB A/B cable). In addition, only windows corresponding to computer systems (as opposed to pure video systems) can be accessed through Remote mode.

#### Tips on Navigating the Sequoia Dual:

- ❖ A maximum of four computers can be connected to a single Sequoia Dual. The Sequoia Dual puts the images of two selected computers onto two windows and simultaneously displays them on the monitor. Instant switching of inputs through the user interface is supported; thus, any two of the four computers can be monitored and controlled on the display.
- ❖ When Host mode is active, use the mouse connected to your Sequoia Dual to resize and reposition windows on the display.
- ❖ To switch from Host mode to Remote mode, move the Host cursor to the top-right corner of the targeted window and then click the **Login**  icon (or double-click your mouse's left button any area within that window).
- ❖ When entering Remote mode, your Sequoia Dual automatically transfers its mouse and keyboard control to the selected computer. Use the mouse and keyboard to control that computer as you regularly would.
- ❖ To switch back to Host mode, use the keyboard hot-key **Pause/Break**, or double-click the mouse scroll button. The Sequoia Dual will return to Host mode and the Host cursor will reappear.

## 3.1 Host Mode

In Host mode, users can monitor images of the connected computers and adjust two windows at a time using the provided selections and menu. Basic operations allowed in Host mode are addressed below.

### 3.1.1 Pop-up Selections

Upon moving the Host cursor to the top-right corner of a window, the following pop-up selections will appear:

- ❖  *Swap: enable a window to switch its position with the other window*
- ❖  *Login: enter Remote mode and control the computer corresponding to the window*
- ❖  *Full screen: set a window to full screen*
- ❖  *Restore: return from a full-screen view to previous layout*
- ❖  *(left): select DVI-L port input signal*
- ❖  *(right): select DVI-R port input signal*
- ❖  *(left): select HDMI-L port input signal*
- ❖  *(right): select HDMI-R port input signal*

When your Sequoia Dual detects that a particular computer's USB port is not connected, the **Login**  pop-up icon on the corresponding window will be grayed-out.

### 3.1.2 Functions

The Sequoia Dual allows free window resize/reposition and selection of any video and audio inputs directly through its on-screen user interface. The following is a list of summarized functions available in Host mode; additional functions can be referred in Appendix A in details.

Function	
<b>Window resizing</b>	Drag any of the four corners or edges of a window to a desired size
<b>Window repositioning</b>	Drag a window to a desired position
<b>Window position swapping</b>	Move the <u>Host</u> cursor to the top-right corner of a window; click the  icon to swap two windows' positions.
<b>Full screen window</b>	Move the <u>Host</u> cursor to the top-right corner of a window; click the  icon and then the window will maximize to full screen. Click the  icon to return from full screen.
<b>Access a remote computer</b>	Move the <u>Host</u> cursor to the top-right corner of a window; click  icon to enter <u>Remote</u> mode to the corresponding computer. The  icon will be grayed-out if a window does not correspond to a computer system, or if the USB connection between the Sequoia Dual and the computer fails.
<b>Select video source</b>	Method 1: Move the <u>Host</u> cursor to the top-right corner of a window; click the  icon (left) to select DVI-L as the input signal source; click the  icon (right) to select DVI-R as the input signal source; click the  icon (left) to select HDMI-L as the input signal source; click the  icon (right) to select HDMI-R as the input signal source. Repeat the above procedure for the second window.

Function	
	Method 2: Right-click anywhere on the display to call the mouse right-click menu. On the right-click menu, select <b>Source 1</b> and choose <b>DVI (L/R)</b> or <b>HDMI (L/R)</b> from the sub-menu as the input signal source. Repeat the above procedure for <b>Source 2</b> .
<b>Select audio source</b>	Right-click anywhere on the display to call the mouse right-click menu, and then on the right-click menu, select <b>Audio port</b> to choose the source for audio output.

**Table 3-1** Host Mode Functions

 | The minimum window size for the Sequoia Dual to process and display: width = 348 pixel, height = 162 pixel.

### 3.2 Remote Mode

The following hot-keys are available when utilizing your Sequoia Dual under Remote mode.

Keys	
<b>Pause Break</b>	Exits from <u>Remote</u> mode and returns to <u>Host</u> mode.
<b>Ctrl + Shift + Alt + V</b>	This command is used to read the Sequoia Dual's USB device firmware version (USB type B port (source <b>1</b> to <b>4</b> port) located on the Sequoia Dual's rear panel that connects to the computer's USB type A port through a USB A/B cable). Open Microsoft® Notepad and then press <b>Ctrl + Shift + Alt + V</b> to paste the firmware text to Notepad.

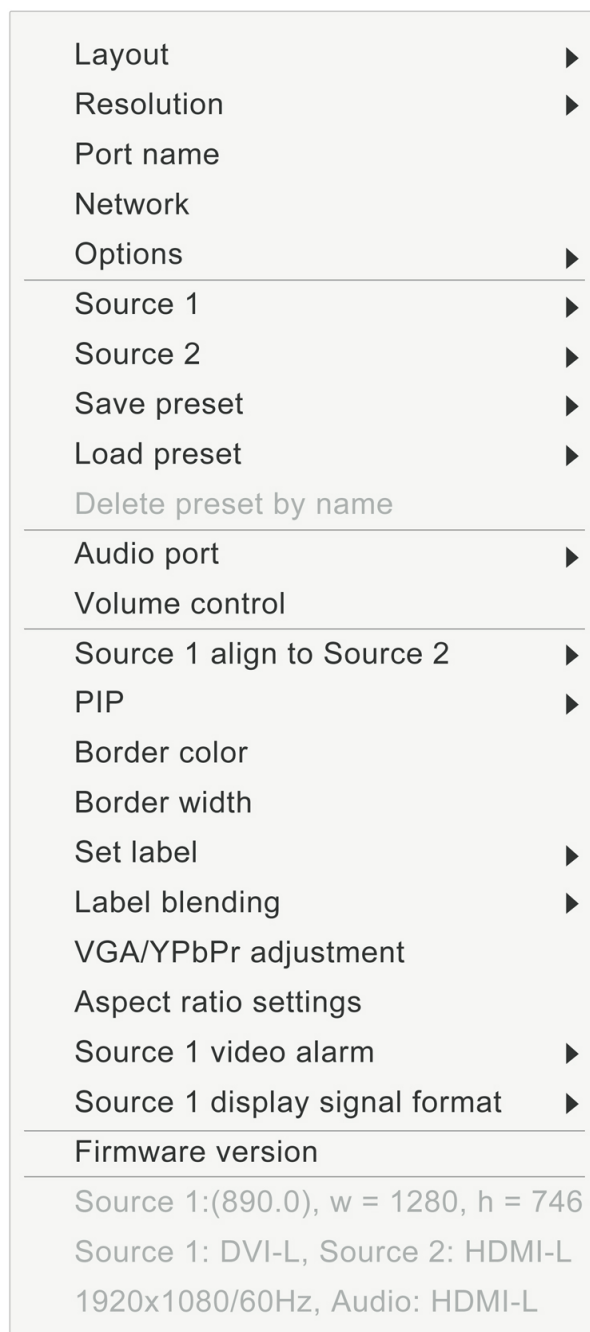

**Table 3-2** Hot-keys of Remote Mode

 | When using an Apple's MacBook computer, use **control + option (Alt) + shift + k** to perform Host/Remote mode switch since there is no **Pause/Break** key.

## Appendix A: Using the Mouse Right-click Menu

The mouse right-click menu contains a collective of display and feature settings for the Sequoia Dual such as customization of the user interface, video/audio source selections, remote monitoring, presets save/load, and port selections for file/folder transfer across computers. The menu, as shown in the figure below, can be called upon right-clicking anywhere on the on-screen interface when the Sequoia Dual is in Host mode.

This appendix discusses each item listed on the mouse right-click menu.

**Figure A-1** Mouse Right-click Menu

## Right-click Menu

### Layout

- Picture Over Picture
- Picture In Picture
- Picture By Picture
- Full Screen

Arrange the two windows on the display into **Picture Over Picture**, **Picture In Picture**, or **Picture By Picture** layout, or **Full Screen** for Source 1 window.

### Resolution

- 60 Hz ▶
- 50 Hz ▶
- 75 Hz ▶
- other ▶
- EDID Check ▶
- Auto Detect

Set the frame rate and display resolution of your Sequoia Dual's display. The supported frame rates and display resolutions can be referred in 1.3, Specifications.

**EDID Check** (*default setting is ON*) allows the Sequoia Dual to output the optimum frame rate and resolution supported by the connected display (if no resolution is specified).

*Note: If **EDID Check** is disabled, the Sequoia Dual will automatically output 1024×768 instead (if no resolution is specified).*

### Port name

Set port name:

Set the name(s) of the video input port(s).  
Default: DVI-L/DVI-R/HDMI-L/ HDMI-R.

### Network

Set network :

MAC Address

DHCP

IP Address

Sub mask

Gateway

DNS1

DNS2

Streaming

Remote login account

Remote login password

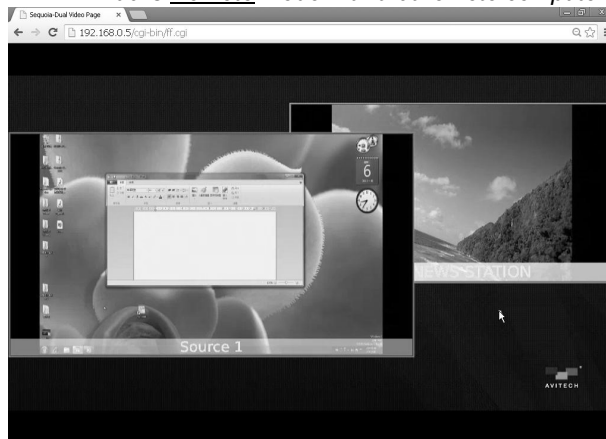

## Right-click Menu

Enable remote monitoring of the Sequoia Dual's display on another computer (multiple computers can perform remote monitoring simultaneously). To perform remote monitoring on one computer, follow the procedures below:

- Step 1. Toggle **ON** the **Streaming** check box on the **Network** window.*
- Step 2. Connect your Sequoia Dual to a computer intended for remote monitoring through Ethernet cable(s) (direct connection or through a Ethernet hub). Streaming video can only be run with VLC Media Player, so make sure your remote computer has the player properly installed before proceeding.*
- Step 3. Check whether your Sequoia Dual and the remote computer are under the same network by pinging the IP address of the Sequoia Dual on that computer's command prompt.*
- Step 4. Once the connection is established, type in the IP address of your Sequoia Dual (set on the **Network** window) on a web browser (Chrome/Firefox) on the remote computer. Then log in with the user account set up on the **Network** window. Once logged in you will see the streaming video of your Sequoia Dual's display.*

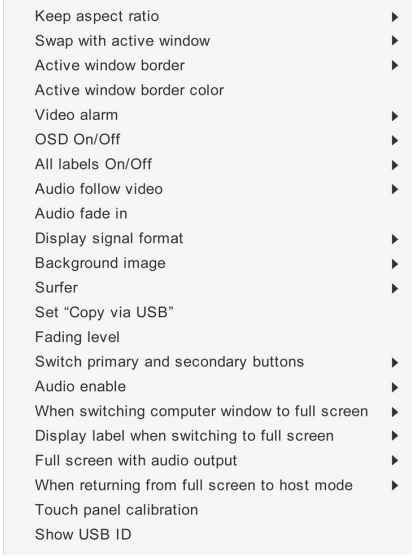

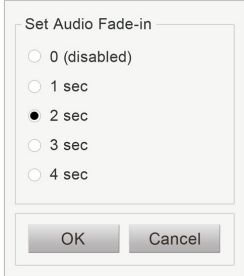

- Step 5. When your Sequoia Dual is in Host mode, you can control it through that remote computer's keyboard and mouse. It should be noted that this control is only limited to Host mode control; you will not be able to control other computers through the Sequoia Dual's Remote mode with that remote computer.*

***Note:** Referring to the **Network** window, the **MAC Address** is a fixed address corresponding to the network interface card inserted in your Sequoia Dual. The **DHCP** check box (if toggled on) enables automatic assignment of an IP address to your Sequoia Dual; instead you can choose to manually input an address or use the factory-default one (192.168.0.5) for the **IP Address**. The **Sub mask** sets the number of IP addresses available in your local area network; in other words, the*

## Right-click Menu

number of remote computers supported for remote monitoring. The **Remote login account** and the **Remote login password** (default: 123456) are used to access streaming video on a web browser(s). Make sure to press **OK** when done setting them.

<b>Options</b>	
	<p>The <b>Options</b> sub-menu includes a list of settings to customize the Sequoia Dual's user interface, in addition to touch-screen related setups. Select or toggle on/off a particular feature to modify its behavior.</p>
<b>Keep aspect ratio</b>	<p>Confine each window to a fixed width-to-height ratio; a resized window will also follow this aspect ratio. By default, the aspect ratio of a window is set to match that of its corresponding video source, but can be customized as well (refer to <b>Aspect ratio settings</b>).</p>
<b>Swap with active window</b>	<p>An active window corresponds to the remote computer where your Sequoia Dual enters <b>Remote</b> mode. <b>Swap with active window</b> enables the window of the computer targeted for remote control to automatically swap its position and size with the previous active window. This swapping feature allows the image of the computer controlled by the Sequoia Dual (<b>Remote</b> mode) to always be displayed on a particular window. <i>Note: When <b>Keep aspect ratio</b> is turned on, your windows will not interchange their sizes upon swapping, but will be resized based on the aspect ratio of each of their video source.</i></p>
<b>Active window border</b>	<p>Enable the active window to have a different border color.</p>
<b>Active window border color</b>	<p>Set the border color of the active window. Refer to <b>Border color</b> for color setting methods.</p>
<b>Video alarm</b>	<p>Enable video loss detection by displaying an alert message(s) on any window that fails to receive video signal(s).</p>
<b>OSD On/Off</b>	<p>Display/Hide labels, signal formats, and window borders on the two windows.</p>
<b>All labels On/Off</b>	<p>Display/Hide labels on the two windows (only effective when <b>OSD On/Off</b> is turned on).</p>
<b>Audio follow video</b>	<p>Enable automatic switching of the audio port when its corresponding video input port is selected on a window.</p>
<b>Audio fade in</b>	 <p>Set the level of audio fade-in effect upon switching between audio ports.</p>

Right-click Menu	
<b>Display signal format</b>	Display/Hide resolutions and frame rates of the video inputs currently selected on the two windows. This switch, if turned off, disables <b>Source 1/2 display signal format</b>
<b>Background image</b>	Display/Hide the background image on the display. Images that are not provided by default can be saved to the Sequoia Dual through the USB type A port (for mouse and keyboard) on its front panel (supported image formats are jpg, bmp, and png).
<b>Surfer</b>	Enable automatic switching of the Sequoia Dual's keyboard and mouse control from a computer to another by moving the mouse cursor from the former window to the latter one. This feature allows your Sequoia Dual's keyboard and mouse control to transfer to different remote computers without the need to return to <u>Host</u> mode. Please refer to Appendix C for details.
<b>Set "Copy via USB"</b>	<div style="border: 1px solid gray; padding: 5px; margin-bottom: 10px;"> <p style="text-align: center;">Set USB Copy Manual</p> <p>Select:</p> <ul style="list-style-type: none"> <li>Auto</li> <li>Auto</li> <li>Port 1 to Port 2</li> <li>Port 1 vs Port 3</li> <li>Port 1 vs Port 4</li> <li>Port 2 vs Port 3</li> <li>Port 2 vs Port 4</li> <li>Port 3 vs Port 4</li> <li>Connection off</li> </ul> </div> <p>Select two USB ports corresponding to two connected computers as endpoints for file and folder transfer. The Go! Bridge Utility will only initiate when both of the selected ports are currently displayed on the two windows. Select <b>Auto</b> if your Sequoia Dual is connected to exactly two computers, and select <b>Connection off</b> to terminate file/folder transfer. Please refer to Appendix B for details</p>
<b>Fading level</b>	<div style="border: 1px solid gray; padding: 5px; margin-bottom: 10px;"> <p>Enter a value between 1 (quick) and 15 (slow) :</p> <p style="text-align: center;">0</p> <p style="text-align: center;">OK      Cancel</p> </div> <p>Set the speed of an overlaying window that fades into the background when the other window is selected.</p>
<b>Switch primary and secondary buttons</b>	Interchange the functions of the connected mouse's primary and secondary button (default: left button is set as the primary button).
<b>Audio enable</b>	Turn on the audio output of your Sequoia Dual.
<b>When switching computer window to full screen</b>	<div style="border: 1px solid gray; padding: 5px; margin-bottom: 10px;"> <p style="text-align: center;">Transfer control to this remote computer</p> <p><input checked="" type="checkbox"/> Not transfer control to this remote computer</p> </div> <p>Enable/Disable automatic transfer of keyboard and mouse control from the Sequoia Dual to a computer when its corresponding window is set to full screen (in other words, if this feature is turned on, your Sequoia Dual will automatically enter <u>Remote</u> mode to a computer when its corresponding window is set to full screen).</p>
<b>Display label when switching to full screen</b>	Enable the two windows to display their labels when set to full screen (only effective when <b>OSD On/Off</b> and <b>All labels On/Off</b> are both turned on).
<b>Full screen with audio output</b>	Enable automatic switching of the audio port to follow the video input port selected on a window when that window is set to full screen.
<b>When returning from full screen to host mode</b>	<div style="border: 1px solid gray; padding: 5px; margin-bottom: 10px;"> <p style="text-align: center;">Remain full screen upon pressing Pause/Break Key</p> <p><input checked="" type="checkbox"/> Return to previous layout upon pressing Pause/Break Key</p> </div> <p>Enable/Disable a full screen <u>Remote</u> mode window to automatically return to its non-full-screen layout upon exiting <u>Remote</u> mode.</p>
<b>Touch panel calibration</b>	Calibrate tapping-actions when connecting a touch-screen display to the Sequoia Dual for the first time
<b>Show USB ID</b>	For any touch-screen display that does not recognize the Sequoia Dual after performing <b>Touch panel calibration</b> , click <b>Show USB ID</b> . After its pop-window appears, unplug the USB cable connected to the

## Right-click Menu

touch-screen display, and then the ID number corresponding to that display will appear on the pop-up window. Please send this string of ID number to Avitech. An updated firmware that supports the corresponding touch-screen display will be delivered.

### Source 1

Select the input signal source for Source 1 window. Select from **DVI-L/R** or **HDMI-L/R** ports. The icon of the selected port will be marked with a red check.

### Source 2

Select the input signal source for Source 2 window. Select from **DVI-L/R** or **HDMI-L/R** ports. The icon of the selected port will be marked with a red check.

### Save preset

Presets are files that contain user-configured display layouts with already-adjusted settings. They allow users to keep their desired layouts for later uses without the need to repeatedly perform the same configuration. Saved presets are stored to the Sequoia Dual's flash memory and can be loaded anytime during the operation.

To save a preset, perform the following steps:

*Step 1. Configure a new display layout and change settings if desired.*

*Step 2. Click **Save to preset**. A pop-up window with a default filename will appear on the display.*

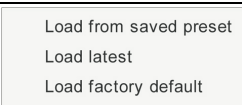

*Step 3. Edit the filename if desired (the file extension **sav** will be automatically added to the filename), and then click **OK** to save the file. Repeat step 1-3 for each additional preset.*

Alternatively, click **Save to latest**, and then click **Load latest** (refer to **Load preset**). Your Sequoia Dual will immediately recall the display layout that was last **Save to latest**.

Or, click **Backup** to save presets to a USB device. A pop-up window will appear upon clicking **Backup** only when a USB device is connected to your Sequoia Dual's USB type A port (for mouse and keyboard) on the front panel. This enables presets to be stored externally, allowing them to be transferred to other Sequoia Dual as well.

*Note: Files will not be saved when **Save to preset** is executed by pressing **Enter** on the keyboard. It is suggested to always click the **OK** button to save the preset files.*

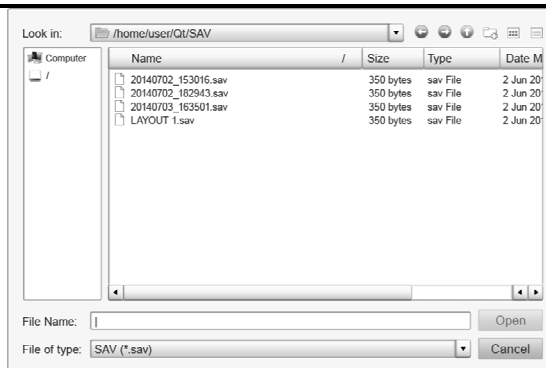

### Load preset

Load a preset previously created by clicking **Load from saved preset**, and then select the desired file from the pop-up window.

## Right-click Menu

Alternatively, click **Load latest** to load the window layout that was last saved using **Save to latest**. This layout will also be the master layout which gets loaded when your Sequoia Dual is powered on.

Or, click **Load factory default** for the default layout if desired.

## Delete preset by name

Delete a saved preset file appearing on the list of the drop-down menu.

## Audio port

Select the audio source to be played. Select from **DVI-L/R**, **HDMI-L/R** or **Analog 1/2/3/4** (from the remote computer's audio ports through the male to dual female Y splitter audio cable) ports. The icon of the selected port will be marked with a red check.

*Note: Transmission of embedded audio signal is supported when passing a HDMI input signal to the DVI-I port using a HDMI to DVI adapter, but not supported when passing a DVI, VGA or YPbPr signal.*

## Volume control

Adjust volume for audio output by using the slider on the pop-up window.

## Source align

Align a selected window with the other one by specifying the reference edge/size.

**Align to top/bottom/left/right:** move the selected window to where its top/bottom/left/right edge aligns with that of the other window. Window size does not alter in this case. If a window exceeds the border of the

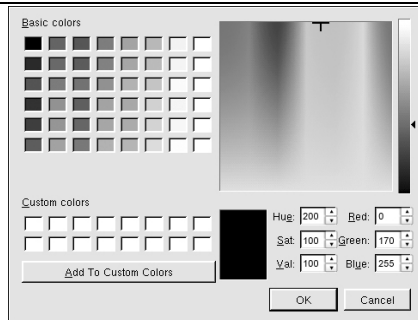

## Right-click Menu

display, that window jumps back to align with the display instead.

**Align to width/height:** set the selected window to have the same width/height as the other one. Window position does not alter in this case.

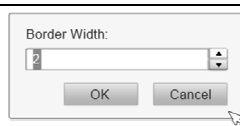

*Note:* **Align to width/height** will not be effective when **Keep aspect ratio** is turned on.

**PIP** This switch appears on the menu when the two windows are in **Picture In Picture** layout, or when a window is set to **Full Screen**. Select on/off to switch between these two layouts.

**Border color** Change the border color of a selected window by performing the followings:

- Step 1. In **Basic colors** on the top-left corner of the pop-up window, click to select a desired color.
- Step 2. Adjust the **Hue**, **Saturation**, and **Brightness Values**.
- Step 3. Adjust the **Red**, **Green**, and **Blue** values.
- Step 4. Add the adjusted color to **Custom colors** by clicking the **Add to Custom Colors** button (or directly drag a color from **Basic colors** to **Custom colors** if no adjustment is needed).
- Step 5. Repeat step 1-4 for any additional color. Click to select a desired color from **Custom colors** to be the border color.

**Border width**  Set the border width of a selected window.

**Set label**  

**Define label:** input a text string that will appear as the label of the selected window (up to 32 characters).

*Note:* This entire user manual refers to the two windows based on their default labels: **Source 1** window and **Source 2** window.

**Font size:** set the font size for a label's text.

## Right-click Menu

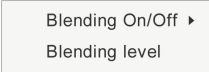

**Font fg & bg color:** change a label's foreground/background color by performing the followings:

- Step 1. In **Basic colors** on the top-left corner of the pop-up window, click to select a desired color.
- Step 2. Adjust the **Hue**, **Saturation**, and **Brightness Values**.
- Step 3. Adjust the **Red**, **Green**, and **Blue** values.
- Step 4. Add the adjusted color to **Custom colors** by clicking the **Add to Custom Colors** button (or directly drag a color from **Basic colors** to **Custom colors** if no adjustment is needed).
- Step 5. Repeat step 1-4 for any additional color. Click to select a desired color from **Custom colors** to be the label color.

**Label On/Off:** display/hide the label of a selected window (only effective when **OSD On/Off** and **All labels On/Off** are both turned on).

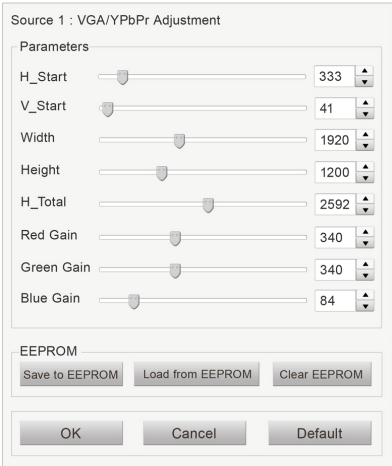

### Label blending

Enable a window's label to become transparent and blend into the image displayed on the window. Transparency level can be set by adjusting the arrow buttons on the **Blending level** pop-up window.

### VGA/YPbPr adjustment

Manual adjustment for VGA/YPbPr input(s) when an image(s) appears off-centered or off-colored; this item only appears for window(s) with VGA/YPbPr input(s):

- ❖ Use the slider to change the **H\_Start** value. The image on the selected window will move towards the left/right upon increasing/decreasing the value on the slider. Continue the adjustment until the image is aligned horizontally.
- ❖ Use the slider to change the **V\_Start** value. The image on the selected window will move upwards/downwards upon increasing/decreasing the value on the slider. Continue the

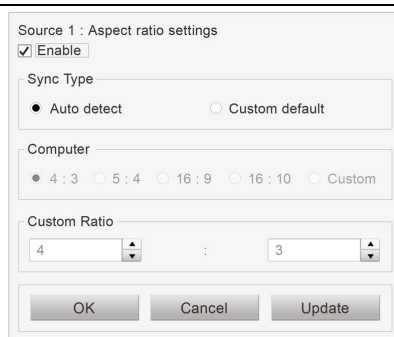

## Right-click Menu

- ❖ adjustment until the image is aligned vertically.
- ❖ Use the slider to change the **Width/Height** value if the image(s) is deformed.
- ❖ Use the slider to change the **Red/Green/Blue Gain** value if the image(s) is off-colored.

Note:

1. The values of **H\_Start** plus **Width** must not exceed that of **H\_Total**.
2. The value of **V\_Total** based on the values of **V\_Start** plus **Height** must not exceed the value automatically computed (by the software) based on the input signal's pre-determined value for **V\_Total**.
3. If a **VGA/YPbPr** source is selected to be displayed on both windows, adjusting one of the images on a window will change the **VGA/YPbPr** adjustment parameters for both images. Each window can however, save its own parameters to **EEPROM** and load the parameters without affecting the other window.

- ❖ Click **Save to EEPROM** to save the adjusted parameters to EEPROM (changed **VGA/YPbPr** parameters will not be saved using **Save preset**).
- ❖ Click **Load from EEPROM** to use the saved parameters.
- ❖ Click **Clear EEPROM** to delete saved parameters.
- ❖ Click **Default** to return to the factory-default parameters.

### Aspect ratio settings

Toggleing on the **Enable** check box on the pop-up window enables users to confine a selected window to an aspect ratio (only effective when **Keep aspect ratio** is turned on).

Under **Sync Type**, the default **Auto detect** sets the aspect ratio of the selected window to be identical to that of its video source; selecting **Custom default** instead enables users to alter the aspect ratio to the followings:

- ❖ 4:3
- ❖ 5:4
- ❖ 16:9
- ❖ 16:10
- ❖ *custom*

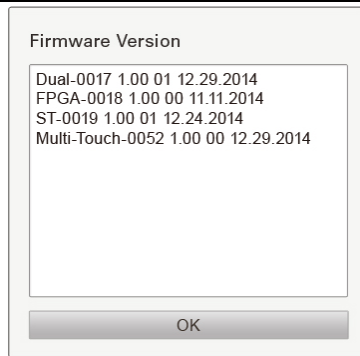

Select **custom** and adjust the width-to-height ratio if the desired aspect ratio is not listed above.

Click **Update** to view changes without closing the pop-up window.

<b>Source 1/2 video alarm</b>	Enable an alert message to be displayed on Source 1/2 window upon detecting no video input.
<b>Source 1/2 display signal format</b>	Enable the resolution and frame rate of Source 1/2 window's corresponding image to be displayed on its window's top-left corner (only effective when <b>Display signal format</b> under <b>Options</b> sub-menu is turned on).

**Right-click Menu**

**Firmware version**

Display information of the firmware version and associated chips embedded in your Sequoia Dual.

**Others**

The last three items on the mouse right-click menu contain the following information (this portion is grayed-out and not selectable):

- ❖ *Coordinate of the selected window's starting point/pixel (a window's top-left corner is defined as its starting point; the top-left corner of the display is defined as (0,0))*
- ❖ *Width and height of the selected window*
- ❖ *Video input ports selected for the two windows*
- ❖ *Resolution and frame rate of the Sequoia Dual's display*
- ❖ *Audio port selected for the Sequoia Dual's audio output*

**Table A-1** Mouse Right-click Menu Description

## Appendix B Using the GO! Bridge Utility

A single Sequoia Dual can connect up to four computer systems. The Sequoia Dual puts the images of two selected computer systems onto two windows and simultaneously displays them. Instant switching of inputs through your Sequoia Dual's user interface is supported in Host mode; thus, any two of the four connected computers can be displayed and controlled on a single monitor.

In addition to monitoring solutions, the Sequoia Dual also features in file and folder transfer across the connected computers. This appendix introduces the GO! Bridge Utility - a handy feature not only to browse the files and folders contained in the hard drives of the connected computers, but also use the copy-and-paste or drag-and-drop methods to manage and transfer these files and folders across computers.

The following steps show how to start up GO! Suite to use the GO! Bridge Utility:

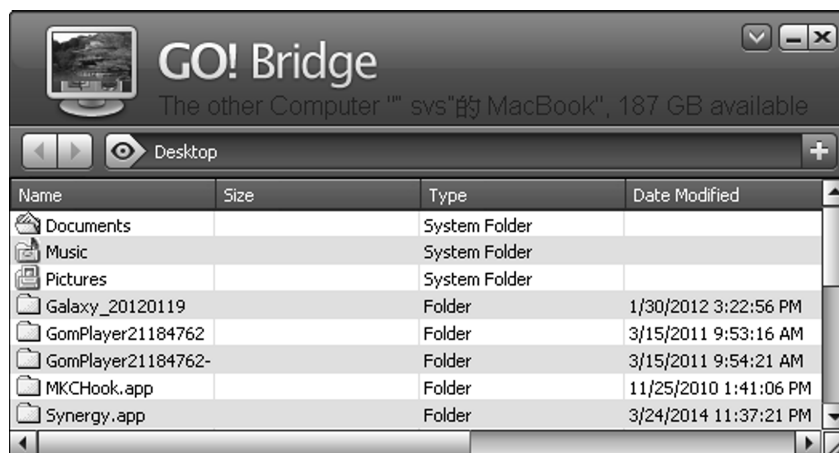

**Step 1.** Connect a USB A/B cable to the first computer's USB type A port and then connect the other end to the Sequoia Dual's source 1 port (USB type B port on its rear panel). The computer will start recognizing the USB connection. When initialization is complete, the following will be displayed on Source 1 window.

**Figure B-1** GO! Bridge Initialization

 *Go! Bridge will not be executed automatically under Win7/Win8 operating systems; therefore manual installation will be required.*

**Step 2.** Connect another USB A/B cable to the second computer's USB type A port and then connect the other end to the Sequoia Dual's source 2 port (USB type B port on its rear panel). The computer will start recognizing the USB connection. When initialization is complete, the next sample screen will appear showing the Desktop content of the first computer on Source 2 window. A similar window as figure B-2 below will also be displayed on Source 1 window, showing the Desktop content of the second computer. A "bridge" between the two computers is now established allowing transfer (copy/paste) as well as deletion of files and folders through the Sequoia Dual.

**Figure B-2** GO! Bridge Initialization

Step 3. Click this icon on the top-right corner of the Go! Bridge's interface, and then select **Open Dock** to open up the Dock panel as shown below. Multiple files/folders can be placed onto the Dock panel so that those destined for the same destination can be transferred at the same time.

**Figure B-3** Dock Panel

Step 4. To manage files or folders on Go! Bridge's Main panel, or add them to the Dock panel, right-click the desired file or folder on the Main panel, and then on the pop-up menu, select any of the followings:

- ❖ **Open** – open the selected file/folder (can also double-click it). *Note:* Some executable files (“*.exe*”) that require other supporting files such as graphic resources, library, etc. may not run on the remote computer.
- ❖ **Add to Dock** – add the selected file/folder to the Dock panel (can also drag-and drop to the Dock panel)
- ❖ **Rename** – change the name of a selected file/folder.
- ❖ **Copy** – copy the selected file/folder to paste to another destination. After copying the file/folder, select
- ❖ **Paste** – complete the file/folder transfer by pasting the file/folder to the desired destination. *Note:* Pasting to the same destination as the source location or pasting to the same computer is not allowed.
- ❖ **Delete** – remove the file/folder from the list. Click **OK** to confirm.

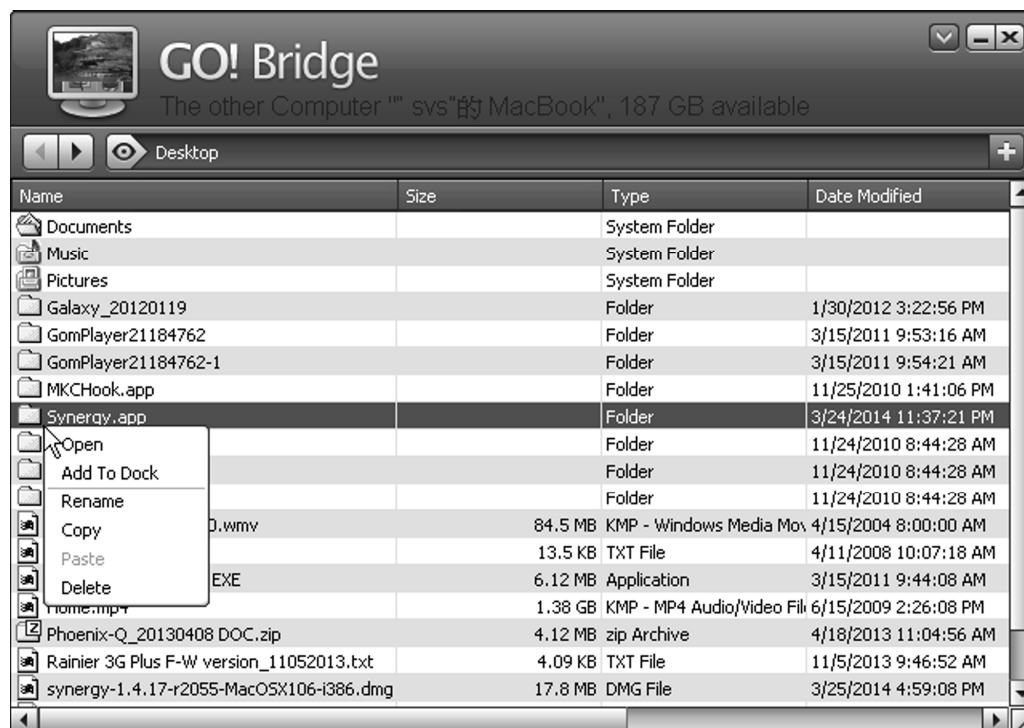

Figure B-4 Right-click File/Folder Menu on Main Panel

Step 5. To manage files or folders added to the Dock panel, right-click the desired file or folder on the Dock panel, and then in the pop-up menu, select any of the followings:

- ❖ **Copy** – copy the selected file/folder to paste to another destination. After copying the file/folder, select
- ❖ **Paste** – complete the file/folder transfer by pasting the file/folder to the desired destination.
- ❖ **Remove from Dock** – remove the selected file/folder from the Dock panel.
- ❖ **Select All** – select all the files/folders on the Dock panel. This will make the transfer much easier if all the files/ folders are to be moved to the same destination; perform copy-and-paste to the selected files/folders or simply drag-and-drop them to the desired destination.

**Figure B-5** Right-click File/Folder Menu on Dock Panel

Click the **view** icon as shown below to bring up the list of the default directory, the devices of the other computer, and recent path(s) previously browsed.

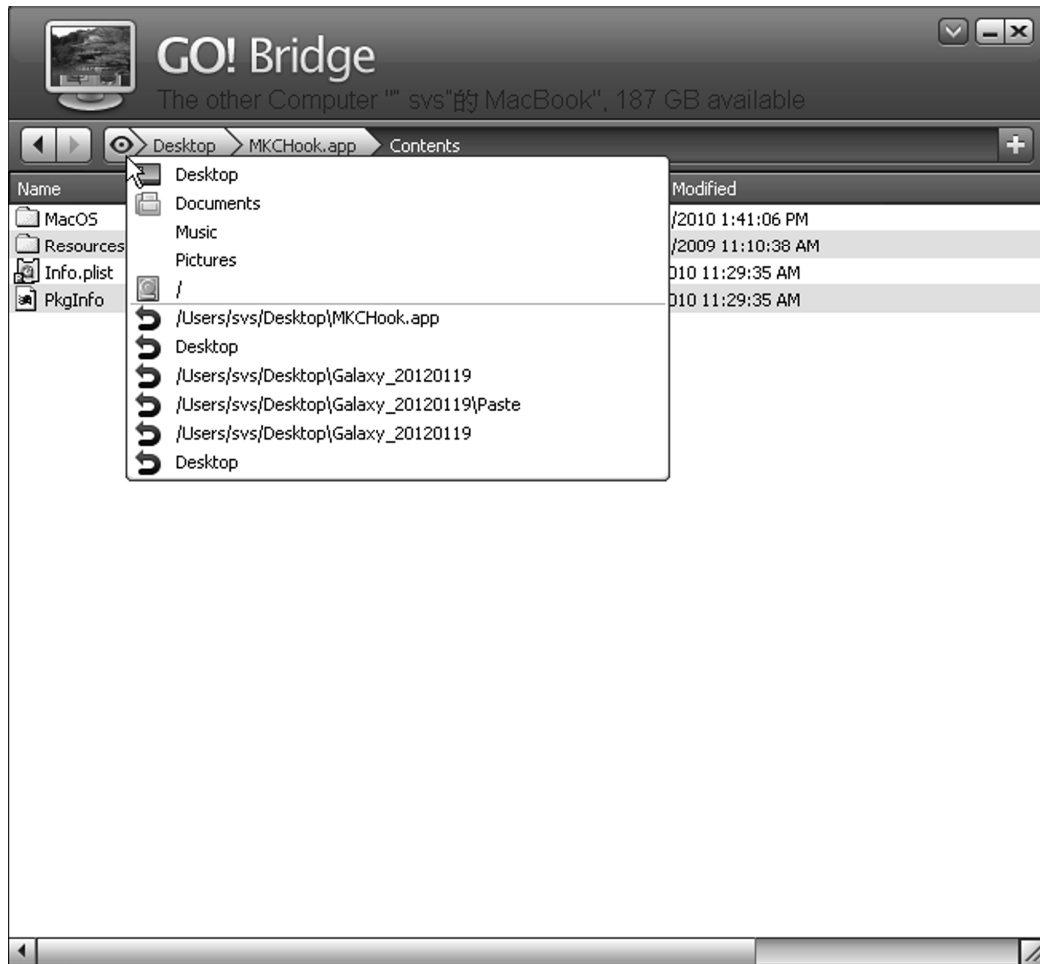

Figure B-6 View Button

Click the **add folder** icon as shown below to add a new folder to the present directory of the other computer. You can also designate the name of the new folder.

**Figure B-7** Add New Folder and Designate the Name

Click the **monitor** icon to switch from the main panel display (*window mode*) to *icon mode*. In *icon mode*, dragging the file/folder(s) from the host computer onto the Go! Bridge icon transfers them only to the root directory of the other computer.

Click the **monitor** icon again to switch back to the main panel display (*window mode*).

## Appendix C Using the “Surfer” Feature

The “Surfer” feature is designed for ease of switching the Sequoia Dual's keyboard and mouse control from one remote computer to another. When under non-full-screen Remote mode, simply move the cursor from the current window toward the nearest edge(s) of the other window. The Sequoia Dual's keyboard and mouse control will automatically be transferred to the computer corresponding to that window when the mouse cursor leaves the former window to the later one. This appendix discusses different “Surfer” scenarios for single and cascaded Sequoia Dual. It should be noted that “Surfer” is a Remote mode feature, and the following scenarios presume that your Sequoia Dual is in Remote mode.

By default, the “Surfer” feature is enabled upon starting up the Sequoia Dual.  
Select **Options**→**Surfer** under the mouse right-click menu to toggle off this feature desired.

### C.1 “Surfer” Feature on Uniform Dual Layout That Fills Entire Screen

- ❖ *The figure below shows an allowed control switching action upon moving the mouse cursor toward the window border of Source 1, as indicated by the arrow and shaded line. Moving the cursor from Source 1 window to Source 2 window transfers keyboard and mouse control from the former window to the latter one (transfer occurs upon the cursor touches the edge shared by both windows). Moving the cursor from Source 2 window to Source 1 window also transfers control from Source 2 to Source 1 (not shown). It should be noted that the arrow and shaded line shown in the figure only indicate the direction the cursor moves; they will not appear on the actual display.*

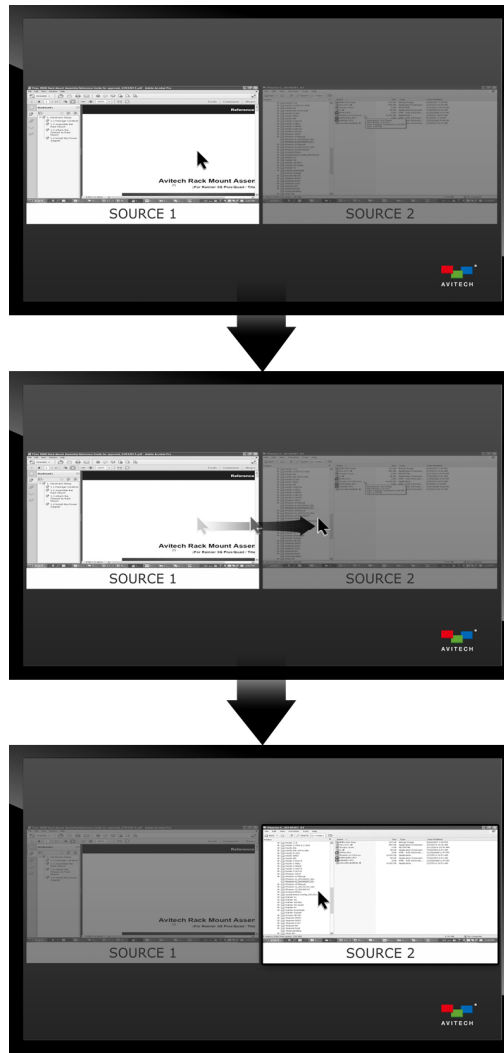

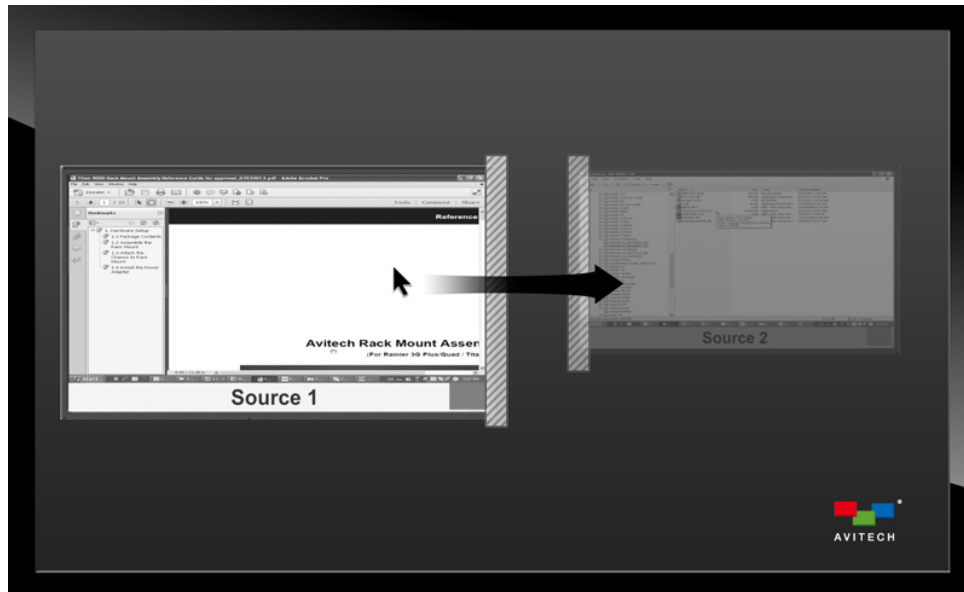

Figure C-1 “Surfer” Feature on Uniform Dual Layout

## C.2 “Surfer” Feature on Non-adjoint Dual Layout

- ❖ *The figure below shows an allowed control switching action upon moving the mouse cursor toward the border of a non-adjoint window (indicated by the arrow and line indicator). Moving the cursor from Source 1 window to Source 2 window transfers keyboard and mouse control from the former window to the later one (transfer occurs upon the cursor leaves the right edge of Source 1 window). The arrow and shaded line shown in the figure only indicate the direction the cursor moves; they will not appear on the actual display.*

**Figure C-2** “Surfer” Feature on Non-uniform, Non-adjoining Dual Layout

 In the case of a source window overlaid with the other one, switching of control will occur when the mouse cursor has left the area where the two windows overlay (toward the targeted window).

### C.3 “Surfer” Feature on Full Screen “Source” Window

- ❖ The figure below shows allowed control switching actions upon moving the mouse cursor to the left or right edge of a full-screen window (indicated by arrows and line indicators). Moving the cursor in such ways switches the full-screen window to the other window, and transfers keyboard and mouse control from the former window to the latter one.

**Figure C-3** “Surfer” Feature on Full Screen Source Window

## C.4 “Surfer” Feature on Cascaded System

- ❖ The figure below shows a sample of 3-Sequoia Dual cascaded system. The “Surfer” feature is confined within each Sequoia Dual only (refer to the above-mentioned illustrations on using the “Surfer” feature within each Sequoia Dual).
- ❖ For example, if a user is currently in control of Source 1 window on Sequoia 2 (Remote mode), and wishes to switch control to Source 2 window on Sequoia 3 (Remote mode), perform the followings:

Step 1: Press **Pause/Break** key (or double-click the mouse scroll button) to exit Remote mode and re-enter Host mode. Control of Source 1 window on Sequoia 2 has now been disengaged.

Step 2: Move the Host cursor to the right edge of the display of Sequoia 2 to allow the cursor to jump to the left edge of the display of Sequoia 3 (still in Host mode, but this time the location of the Host cursor is now in Sequoia 3).

Step 3: Move the Host cursor over to the top-right corner of Source 2 window on Sequoia 3 and click the **Login**  icon of the pop-up selections  (or double-click the mouse left button anywhere within the window) to switch control to Source 2 (enter Remote mode).

The “Surfer” feature can now be used within Sequoia 3.

Legend:

Host mode action (moving between multiple Sequoia Dual): dotted lines and gray arrows

Remote mode action (moving within a particular Sequoia Dual): black arrows

**Figure C-4** “Surfer” Feature on Cascaded System

Up to five Sequoia Dual can be cascaded together.

## Appendix D Using the Top Menu

The top menu is a Host mode feature designed for ease of shifting between multiple display layouts. It also has the “lock” function to suit applications that prefer fixed windows on the display. This menu locates at the bottom of the display and pops up when the Host cursor is near by. Simply click a particular icon to execute its function.

Figure D-1 Top menu with its functional icons

- ❖ The top menu contains eight functional icons as indicated in the figure above (the **Menu** icon is not functional).
- ❖ The **lock**  icon locks the current layout of the Sequoia Dual's display, and disables any adjustment of window size and position made by the Host cursor. In the case when two windows overlay, the selected window will come to the top-most layer of the display and the other one will fade into background. Other functions such as those on the pop-up selections and the mouse right-click menu are still available even when the “lock” function is enabled. To disable the “lock” function, click the **unlock**  icon (the **unlock** icon replaces the **lock** icon when “lock” is enabled).
- ❖ The next four icons provide the same functions that are also available in **Layout** under the mouse right-click menu: **Picture Over Picture** , **Picture By Picture** , **Picture In Picture** , and **Full Screen**  respectively. These icons on the top menu serve as shortcuts for the mouse right-click menu, and can be used to alter your display layout even when the “lock” function is enabled.
- ❖ The three icons on the right of the top menu (also shown below) each represent a saved preset. A preset is a file that contains user-configured layout with already-adjusted settings. Users can have multiple presets stored to the Sequoia Dual for future references, but only the latest three presets saved can be loaded from the top menu as shortcuts (only presets saved by **Save to preset** are linked to the top menu). When the number of presets reaches or exceeds three, any new preset saved will replace the old one (in the order of preset 1, 2, and 3). Presets that are replaced are still stored in the Sequoia Dual and can be accessed by the mouse right-click menu. Switching between presets under the top menu can also be achieved when the “lock” function is enabled.

: Load user-defined preset 1

: Load user-defined preset 2

: Load user-defined preset 3

## Appendix E Using the Touch-screen

The Sequoia Dual features in multi-touch support for touch-screen displays. To operate the Sequoia Dual on a touch-screen display for the first time, perform setups instructed in 2.1.1. Once the setup is complete, select **Touch panel calibration** under the mouse right click menu - **Options** sub-menu. Finish the calibrating process by tapping the red dots shown on four corners of the display. When done with the calibration, you will be able to operate your Sequoia Dual as you regularly would with a mouse by performing tapping actions on the display.

This appendix discusses different tapping actions that simulate mouse-clicking actions.

### E.1 Move/Resize Window

- ❖ *To move a window, tap anywhere within the window and then drag it to a new position.*
- ❖ *To resize a window, tap anywhere near the edge or corner of the window. When the directional arrow appears, drag the window's border to the desired size.*

Figure E-1 Touch-screen: Move/Resize Window

### E.2 Pop-up Selection

- ❖ *Use a stylus (or finger) to tap area near the top-right corner of a window, and then the following pop-up selections will appear: . To execute the function a particular icon, tap the icon once more (for more information regarding the pop-up selections, refer to p.13).*

### E.3 Top menu

- ❖ *Use a stylus (or finger) to tap area near the bottom of the display and then the following menu will appear: . To execute the function of a particular icon, tap the icon once more (for more information regarding the top menu, refer to Appendix D).*

## E.4 Mouse right-click menu

- ❖ Use a stylus (or finger) to long-tap anywhere on the display for approximately 1 second, and then the mouse right-click menu will appear (Refer to Figure A-1). To extend a sub-menu from an item that has an arrow on its right side, tap the item once more; to execute the function of an item, double-tap the item instead (for more information regarding the mouse right-click menu, refer to Appendix A).

## E.5 Enter/Exit Remote Mode and Host Mode

- ❖ To have the Sequoia Dual enter Remote mode to a connected computer, tap the **Login**  icon from the pop-up selections of the corresponding window; alternatively, double-tap anywhere within the corresponding window.
- ❖ To exit Remote mode from a non-full-screen window, double-tap anywhere outside that window.

When working with a touch-screen display, sometimes it takes 2-4 trials of double-tapping (simulating a mouse double-click action) on the display to have the Sequoia Dual enter Remote mode. This may occur when the precise location of the second tap is slightly away from that of the first tap; or the time interval between the two taps is too long.

- ❖ To exit Remote mode from a full screen window, press the upper or lower inch of the touch-screen display for approximately 1.5 seconds (Refer to Figure E-2).

Tap and continue pressing on the upper or lower areas indicated by the black rectangles

**Figure E-2** Touch-screen: Exit Remote Mode while in Full Screen

When the Sequoia Dual returns from Remote mode to Host mode, the Host cursor will reappear where it last located before that Remote mode; it will not reappear where the double-tapping action outside the active window took place.

## E.6 Switch Control Between Windows

- ❖ *To switch windows while in full screen Remote mode, press within an inch of the left or right edge of the touch-screen display and hold for approximately 1.5 seconds (Refer to Figure E-3).*
- ❖ *To switch windows while in non-full-screen Remote mode, simply long press within the area of the targeted window for approximately 1 second.*

Tap and continue pressing on the left or right areas indicated by the black rectangles

**Figure E-3** Touch-screen: Switch Sources while in Full Screen

## Appendix F Using the Touch-to-Mouse Utility (for Windows XP only)

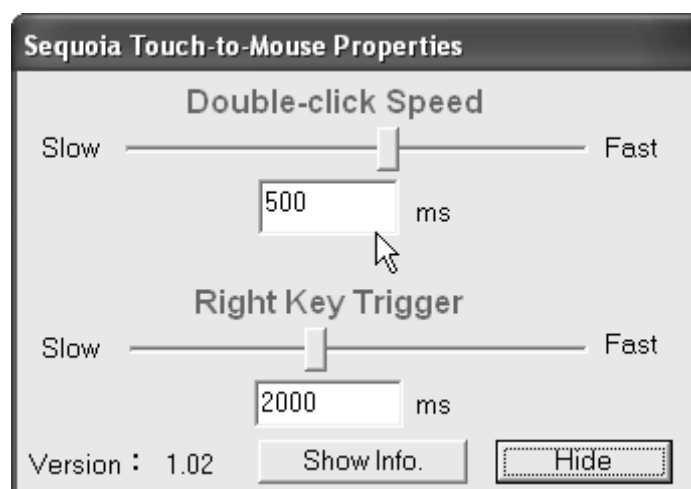

The Touch-to-Mouse Utility is designed for using a touch-screen display to control a remote computer that runs on Windows XP. To start the Touch-to-Mouse Utility, perform the following steps:

*Step 1. Copy the file “Sequoia USB Touch Tool.exe” to the designated computer.*

*Step 2. Run the file: “Sequoia USB Touch Tool.exe”.*

*Step 3. Right-click the Touch-to-Mouse icon appearing on Windows task bar and then select **Settings**.*

*Step 4. Set the **Double-click Speed** with the slider or enter the time in the box next to **ms**. Note: two successive taps on a touch-screen mimic double-clicking the left-mouse button.*

**Figure F-1** Touch-to-Mouse Utility Setup

*Step 5. Set the **Right Key Trigger** with the slider or enter the time in the box next to **ms**. To mimic a right-click action, hold your finger on the touch-screen display until the specified time has elapsed.*

*Step 6. Click **Hide** when finished.*

To have your Windows XP automatically start running the Touch-to-Mouse Utility upon the next boot-up, right-click the Touch-to-Mouse icon and select **Auto-start when Windows starts-up** (a check mark will appear signifying it is enabled).

## Appendix G Resetting to the Factory-Default State

To reset your Sequoia Dual to its factory-default state, perform the following steps:

*Step 1. Power-off the Sequoia Dual.*

*Step 2. Push number 2 (middle) dip switch located on Sequoia Dual's rear panel downwards to the **ON** position.*

**Figure G-1** Push down the Number 2 (Middle) Dip Switch

*Step 3. Power-on the Sequoia Dual.*

*Step 4. Push number 2 (middle) dip switch located on Sequoia Dual's rear panel upwards to the **OFF** position (the Sequoia Dual will not proceed after loading the boot logo if leaving this dip switch **ON**).*

*Upon resetting your Sequoia Dual to its factory-default state, your previously saved presets stored in the Sequoia Dual's flash memory will be automatically removed; make sure to have your files saved externally before resetting the Sequoia Dual to the factory-default state.*
